OVERVIEW

Planner scope (Knauf Phase 1): PM/SM and blended PM/SM + PPM are in scope. Resource Manager chapters (Bulk Project Allocation Flatgrid and enterprise-wide replace flows) ship separately.

1. User Access:

Tempus access will vary based on the setup of each individual user (managed by your Admin team)
Resources who require access can login via SSO and will be assigned a user role and security group

2. Resource Types:

There are two types of resources that can be setup in Tempus

- a) *Named resources*: Individuals allocated to projects and/or setup as Tempus users
- b) *Group resources*: *Resources with underlying capacity for multiple resources e.g., Demand-planning generics*
- c) *Demand Planning resources*: Unnamed resources; generic placeholders for a team or role, used solely for planning

3. Project Types:

There are three types of projects setup in your Tempus instance

- a) Standard projects: "Interrelated tasks organized together in order to reach a specific outcome"
- b) Proposals: Projects still pending approval, denoted by a purple P icon 
- c) Non-Project Activities or Business As Usual projects: Absence, Admin, Run, Change, etc.

4. Assignments

Assignments are created by linking a Resource to a Project

- a. Assignments must include a specific number of time units (Hours, FTE, etc.)
- b. Assignments can be created for one project at a time, or for multiple projects at the same time
- c. Assignments can be applied to the Project (generic task) or to individual named tasks

- Tempus grids support the following Excel-like functionality:
 - Column data can be sorted by clicking the column header
 - Cell data can be copy-pasted via **CTRL+C** and **CTRL+V**
 - Cell data can be copied across or down by clicking the bottom-right corner of a cell and dragged along
- Tempus use several icons (across multiple screens) to represent specific functionality:

Trash Can: Delete selected item(s)

Pencil: Edit/View selected item

Copy/Clone: Copy selected item to clipboard OR Clone selected item

Lock/Unlock: Indicates whether the selected record is locked by another user

Export To: Standard icons for Excel, CSV, or PDF display when applicable

Filter: Filter results based on specified values

Notification: Listed item may need attention (filters, new requests, etc.)

Listed record is a *Demand Planning resource* (generic, placeholder)

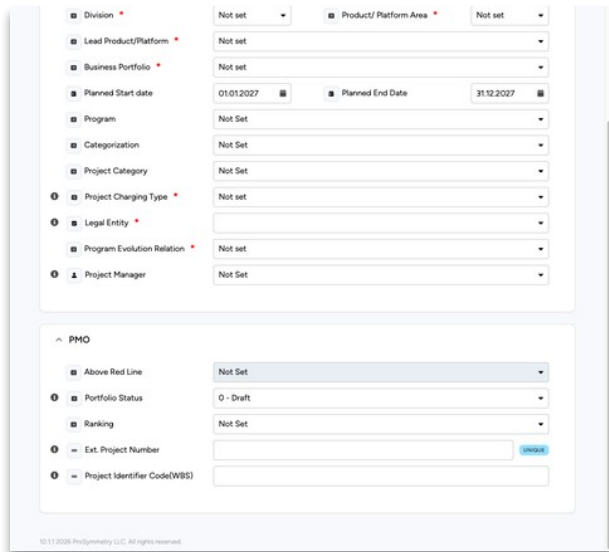

Listed record is a *Proposal*

TEMPUS RESOURCE NAVIGATION

Tempus Resource is an easy to use resource management and workforce capacity planning tool with an intuitive user interface. This section covers the three aspects of navigating Tempus – Logging In, different areas of the Homepage and Main Task Bar, and Subscribing to notifications.

LOGGING IN

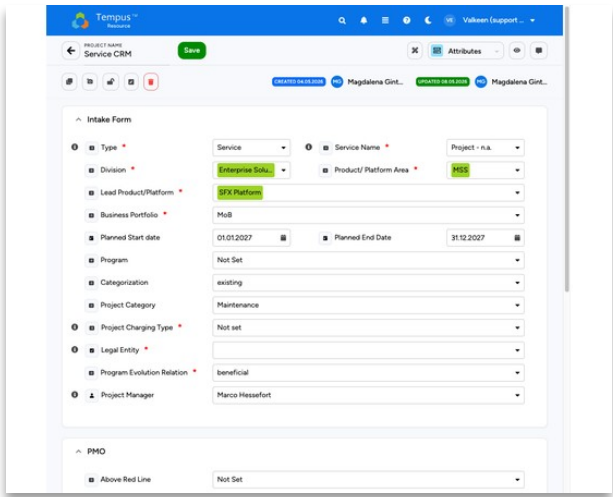

1. Navigate to Tempus Resource using your web browser (<https://knaufdev.tempus-resource.com/>) <https://knaufdev.tempus-resource.com/>
Google Chrome is the recommended browser.
2. Click on the orange button Knauf SSO

3. Sign in using your standard credentials

HOMEPAGE

1. Planner roles (PM/SM and blended PM/SM + PPM) see the homepage tiles provisioned for them — typically Project Management and Report Management. Click on any tile to navigate to the relevant area.

2. The below table provides a high-level description of actions users can perform behind each tile.
Note: The actions may vary depending on each user's role and access permissions.

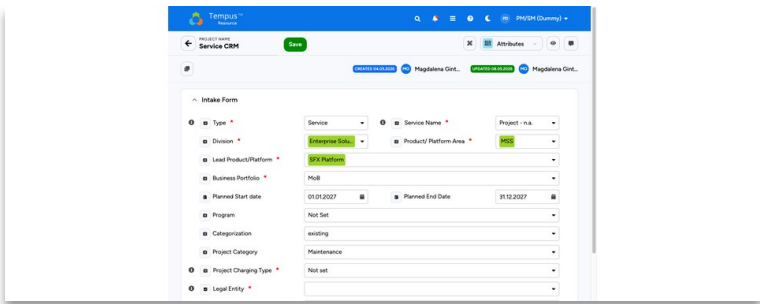

Tile name*	Description
Project Management	View project repository Create projects with / without template Open projects Maintain allocations on the SPA grid
Report Management	Consume shared reports Export to Excel / PDF where licensed

**Highlighted screenshots mirror Knauf Planner onboarding (PM/SM). RM-only surfaces such as Bulk Project Allocation are intentionally omitted from this edition.*

3. The blue ribbon along the top (Task Bar) is available from all screens in Tempus.

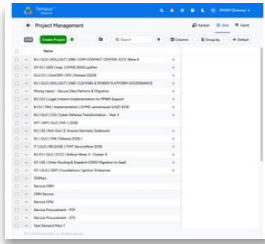

- Click on the Tempus logo to the left to return to the homepage from any screen
- View notifications by clicking on the bell icon
- Locate a specific project via Global Search

- Navigate to any area of Tempus via the hamburger menu
- From the username menu, set up in-app **Subscriptions** or **Logout**.

User Guide

CONFIDENTIALITY/EMAIL NOTICE: The material in this document contains confidential and privileged information intended only for the addressee. Do not distribute, copy, forward, or disclose the contents of this document without the express consent of Valkeen GmbH.

HOW TO SUBSCRIBE TO NOTIFICATIONS

1. From the username menu to the top-right, click on **Subscriptions**.

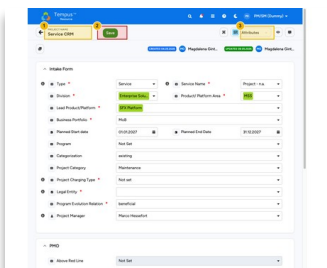

2. In the **Project** tab, click **Add projects** to choose projects to be notified for. Click the green **Add** button.
NOTE: Do **not** select all projects as unsubscribing must be done individually.

As a default, all notifications will be enabled for selected projects.

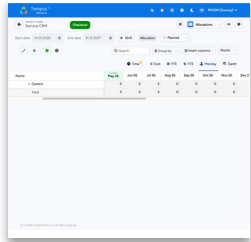

3. To disable a specific notification,
 - Hover over the cell
 - Click the **Edit** icon
 - Update **Yes** to **No**
 - Click the green **Save** button.

4. To update notifications in bulk, follow the same steps as above while selecting multiple cells; by holding down the **Shift Key** on your keyboard and select multiple cells using **arrow keys**.
5. To unsubscribe from a project, click 

PROJECT MANAGEMENT GRID

Click the **Project Management** tile to open the Project List, where you have access to the entire project repository.

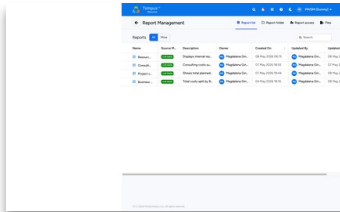

HOW TO CREATE A PROJECT

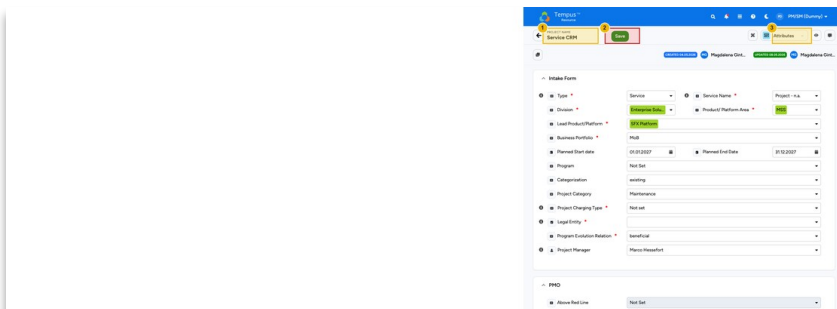

Giving users the ability to create new projects and their tasks within the product is a core component of Tempus Resource. This section outlines how to create a project both with and without a template.

CREATING A PROJECT WITHOUT A TEMPLATE

1. Click on the green **Create Project** button towards the top-left of your Project Management grid and select **Regular Project** from the very top of the list.

2. You will automatically land on the Project **Allocations** screen, where you can enter a **Project Name**, **Start Date**, and **End Date**

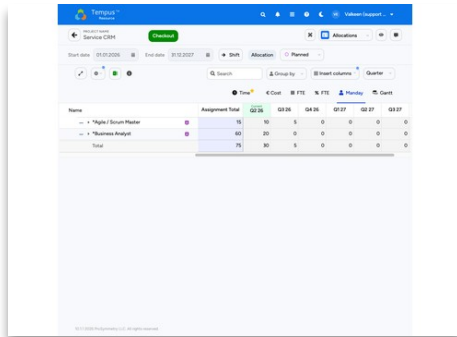

3. Click the green **Create** button to the right of the Project Name to save the new project to your repository.

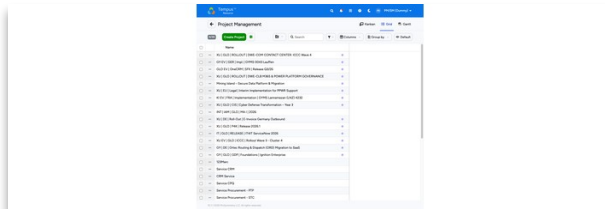

CREATING A PROJECT WITH A TEMPLATE

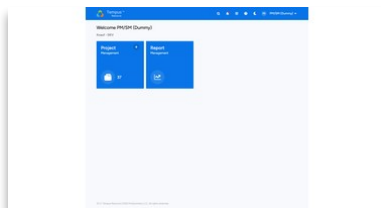

1. Click on the green **Create Project** button towards the top-left of your Project Management grid and select the relevant template from the list.

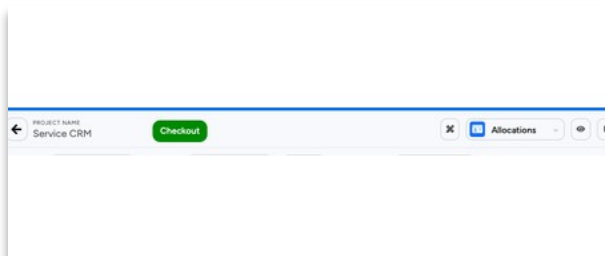

2. Clicking the template will open a modal window in the middle of your screen. Enter the new Project's name and click **Create** to save the new project to your repository.

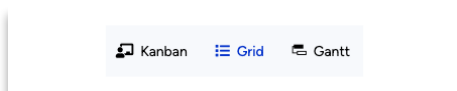

4. You will automatically land on the Project **Allocations** screen. Navigate to Project **Attributes** from the top-right of the screen.

5. To update the project timeframe from the template values, click **Shift**, enter the **New start date**,

6. Review and update all relevant attributes. Ensure that updates are saved by clicking on the green **Save** button at the very top of the screen.

HOW TO UPDATE PROJECT ATTRIBUTES

Project attributes can be updated directly from the Project Management grid, both on an individual-level and in bulk.

EDITING ATTRIBUTES FOR A SINGLE PROJECT

1. Hover over the cell. An **edit icon** will appear to the right of the cell.

2. Click the **edit icon**, choose the new value and click the green check mark icon. Alternatively, press **Enter** on your keyboard.

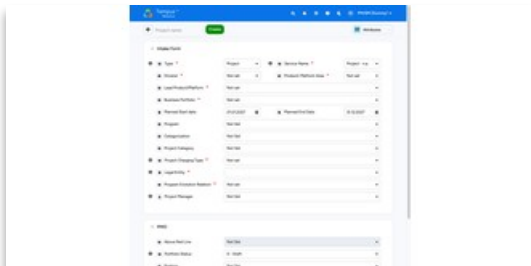

EDITING ATTRIBUTES FOR MULTIPLE PROJECTS

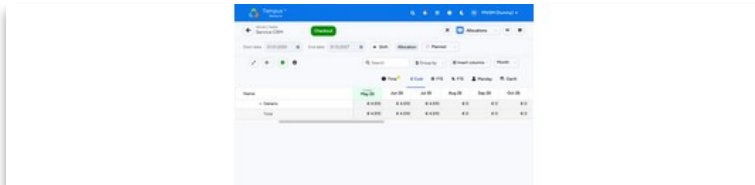

1. Select projects by checking boxes to the left of project names. Selected rows will be highlighted.

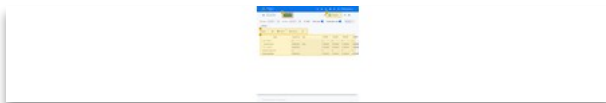

2. To select a range of rows, select the row at the start of the range from the checkbox. Press the **Shift key** on your keyboard and select the last row in the range. All rows will be highlighted.

3. Hover over any cell from selected rows. The **edit icon** will appear to the right of the cell.

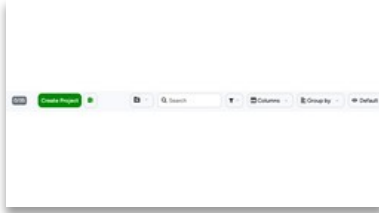

4. Click the **edit icon**, choose the new value, and click the green check mark icon to update the value for **all** selected projects.

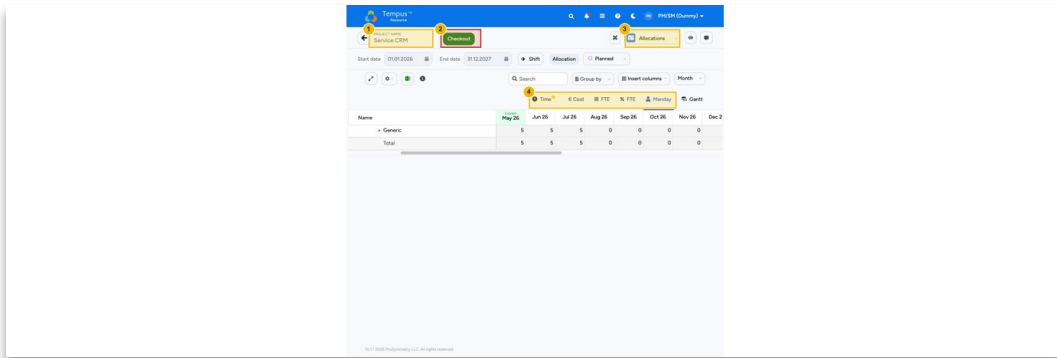

SINGLE PROJECT ALLOCATION GRID

The Single Project Allocation (SPA) grid is where allocations to a single project can be created or updated.

1. Clicking on any project name in the grid will navigate to the **Single Project Allocation** grid by default.

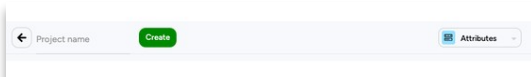

2. Once a project has been created, and a valid date range has been entered, the **Single Project Allocation** grid becomes available.

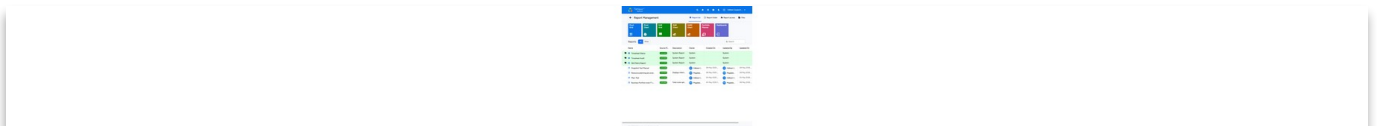

GRID OVERVIEW

1. The **Project Name** and **Checkout** button is located at the top of the grid. To make any changes to a project, it must first be checked out.

2. Basic options to update the grid are in the ribbon below the project start and end date.

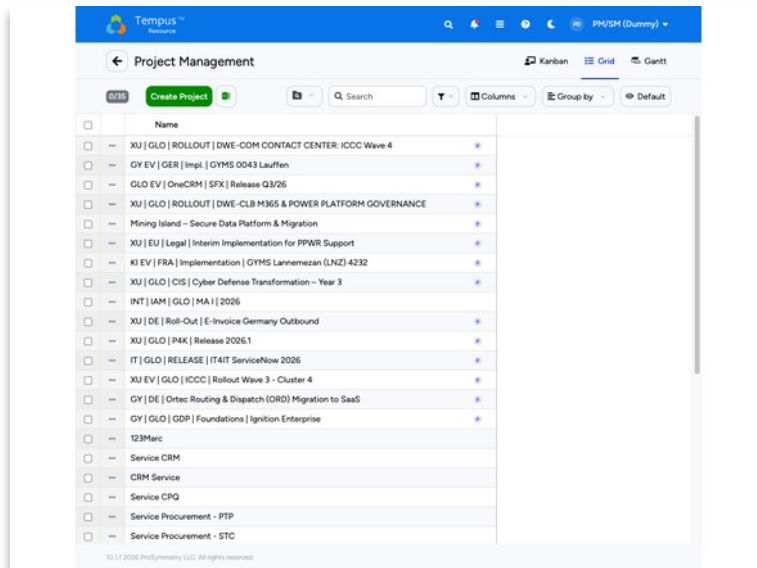

- **Expand** the grid with one-click by clicking on
- **Search** for an assigned resource when the grid is grouped by Resource and for a task name when the grid is grouped by Task.
- **Group by** either Resource or Task.
- **Insert Columns** to view project, resource, or assignment attributes.
- Update Time Granularity by which allocations are displayed. Month is the recommended granularity for Knauf.
- Choose the **Capacity unit** in which allocations are entered/displayed.

Hours are recommended for Knauf capacity planning (switch to Mandays when steering leadership).

- Advanced grid options can be found in the **Options** menu in the ribbon below the project timeframe.

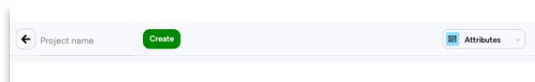

- Enabling the **Total Column** will display a column with total Hours. When viewing the grid in FTE, it will display the average.
- A **Resource Heatmap** will display colours based on overall allocation% of a resource.

- Enabling **Overlay Heatmap for Rows** will apply the selected heatmap on individual grid rows.
- Enabling **Overlay Heatmap for Groups** will apply the selected heatmap on groupings.
- Tasks to Show** will filter tasks and hide the task type that is not selected – generic or non-generic.
- The **Date Range Filter** will filter the grid for a specific timeframe without amending project timeframe.

HOW TO ASSIGN RESOURCES TO PROJECTS

- Click **Checkout** next to the Project Name at the top to make any edits to the project.

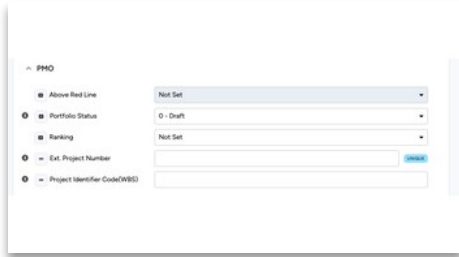

- Expand the grid by clicking on the button with 2 arrows above the **Name** column in the grid.
- To **add a single resource**, click on a blue cell reading **Type a new resource** to start typing the name of the resource or select a resource from the dropdown.

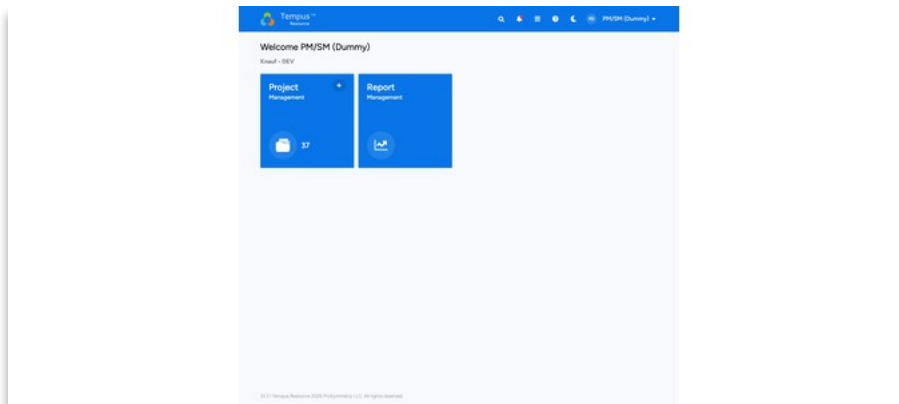

Type-ahead functionality narrows down the available resources to simplify resource loading.

Valkeen GmbH • Bahnhofstrasse 64 • 8001-Zürich, Switzerland

CONFIDENTIALITY/EMAIL NOTICE: The material in this document contains confidential and privileged information intended only for the addressee. Do not distribute, copy, forward, or disclose the contents of this document without the express consent of Valkeen GmbH.

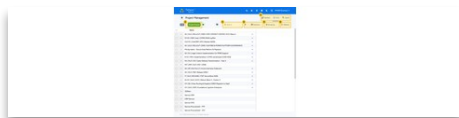

- To **add multiple resources** to one or multiple tasks, click on **Add assignment** to reveal the **New Assignment** dialog. Choose resources to the left and tasks to the right and click **Add**.

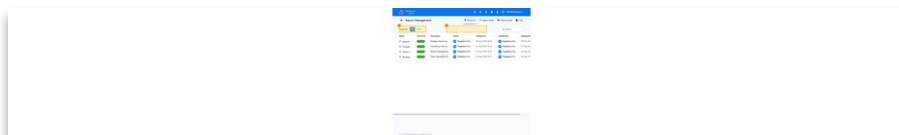

- To **create a new task**, scroll down to the end of the Task list to reveal a green row with the option to **Type a new Task**. Enter the name of the new task and hit enter or click the checkmark to the right of the cell.

- Enter the allocation in Hours on a monthly level. Values can be copy-pasted or clicked and dragged.

- To increase the allocated time for a named resource that has already been allocated to a project, enter the new total requested allocation directly in the grid.
- To save changes, click **Save and Check In** or **Release** them to revert to the previous state.

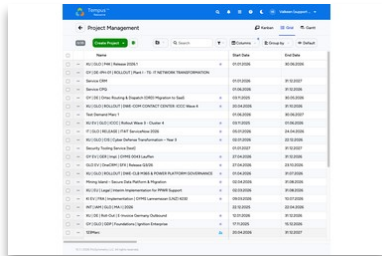

REPLACING A RESOURCE

There are two cases when a resource needs to be replaced in a project –

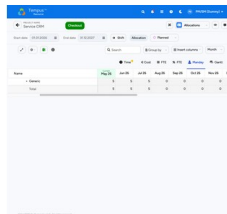

- A. A Demand Planning or Placeholder resource needs to be replaced with a named individual e.g., *Project Manager (RBK) needs to be replaced with another named resource.
- B. A named resource needs to be replaced with another member of the resource pool e.g., another named resource needs to be replaced with Antonio Gonzalez on a given project.

To replace a resource, click on the ellipses next to the resource name to access the **Resource Replace** screen.

RESOURCE REPLACE SCREEN

1. The top of half of the screen displays the current allocation in a grid with the option to update the **time granularity** (Month/Quarter/Year/Week/Day) and **capacity unit** (FTE/Hours).

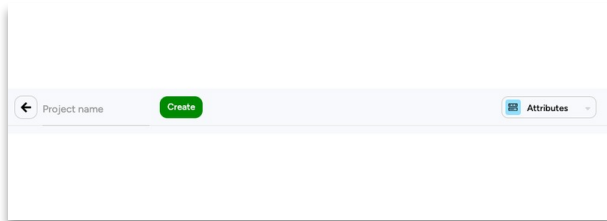

2. The bottom half displays all resources in the resource pool in a **Net Availability grid** to manually query and find the best fit resource by applying filters, inserting columns, or applying a simple red/green heatmap from the Options menu.

Unique

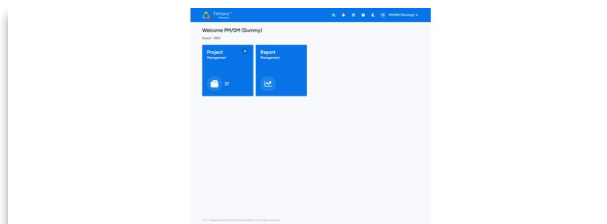

FULLY OR PARTIALLY REPLACING A RESOURCE

1. Select replacement resource(s) from the bottom of the grid and they will automatically appear in the allocation grid above.
2. To fully replace a resource, click **Redistribute** to copy the complete allocation from the original resource to the replacement resource(s). If multiple resources are selected, the original allocation will be equally redistributed among them.

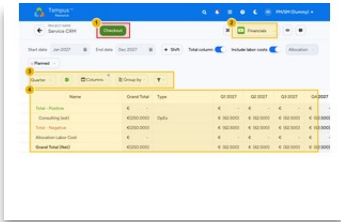

1. To partially replace the resource, update allocations directly in the grid ensuring that the **Total** row displays as green.
2. Click **Replace** at the top of the screen to complete the step.

ADVANCED ASSIGNMENT OPTIONS

Click on the ellipses next to the assignment name to access Assignment Options.

CLONING AN ASSIGNMENT

- To **Clone** an assignment,
 - Enter the **Task name**,
 - Add a **New assignment start date**,
 - If **changing the resource**, toggle on the option and select the new resource's name,
 - Click the green **Apply** button to save changes.

SHIFTING AN ASSIGNMENT

- To **Shift** an assignment
 - Click on **Shift**,
 - Enter a **New Assignment Start Date**,
 - Click the green **Apply** button to save changes.

PROJECT FINANCIALS

- Financial planning completes the Planner triangle together with Attributes and the Single Project Allocation grid. Hourly / Advanced rates are administered by Finance; PM/SM maintain Cost Plan overrides where permitted and interpret Budget vs Actual.

RATES — HOURLY & ADVANCED

- Hourly Rate — blended €/h per named or generic resource for a validity window; shown as read-only context while planning.
- Advanced Rate — dated brackets or uplifts (e.g. vendors). Tempus resolves the effective €/h per period; reconcile surprises via the SPA grid Cost view.

COST PLAN & BUDGET VS ACTUAL

- Cost Plan — derived from Hours × effective rate; Finance-approved manual cells capture non-hour spend (licences, PO-driven costs).
- Budget vs Actual — compares planned cost with booked hours × rate. Align granularity (month / quarter / year) with Knauf steering cadence.

LOCK PERIODS & RE-FORECAST

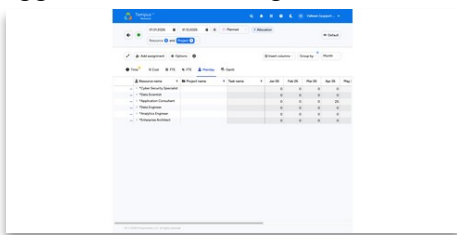

- Lock Periods — closed financial buckets prevent silent retro-edits; escalate hard-lock changes through PMO / Finance.
- Re-forecast — refresh forward buckets after actuals land; prefer SPA edits first so mandays / euros remain coherent before overriding Cost Plan cells.

VIEW MANAGEMENT

- Towards the top-right of the grid, there are various options to customise the Project management grid.

- Use **Quick filters** to navigate to relevant projects e.g., “my projects” will show projects where the logged in user is assigned as the Project Owner.

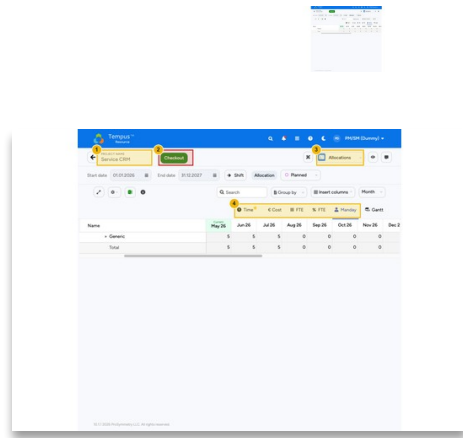

- Search** for a project or projects by name via the search field, which uses “contains” logic.
- Filter** projects by applying as many filters as needed.
- Add or remove **Columns**.
- Group** projects based on any attribute(s). Each grouping level will display the group by attribute, attribute value, and the count of projects contained in the grouping.

- Open the **View Management** dialog by clicking on the view name to the right of the **Group By** button.

User Guide

- Create a new view by clicking **Create view**
- **Lock** a view in its current state by clicking 
- Select a **Default** view by clicking 
- **Edit** a view by clicking 
- **Clone** a view by clicking 
- **Delete** a view altogether by clicking 

3. **Public views** are denoted by the blue eye shaped icon

These views cannot be edited in any way as they are administratively defined.

Always clone a public view using the copy icon , and then click into the newly created view to start working into it.
